

CSA1505 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-4

1. Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Buy, Rent, commercial, Rental Agreement , Rental Agreement, Area, place, Range, property value etc.

AIM:

To develop a simple Property Buying & Rental System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application helps users manage property buying and rental information in Chennai by recording customer and property details.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Property Buying & Rental System.

Design a form with the following fields:

- Customer Name
- Mobile Number
- Email ID
- Property Type (Buy / Rent)
- Property Category (Residential / Commercial)
- Rental Agreement (Yes / No)
- Area (sq.ft)
- Place (Anna Nagar, Adyar, Velachery, Tambaram, OMR, Porur, etc.)
- Budget Range
- Property Value

- Registration Date
- Booking Status

Configure the required drop-down lists, radio buttons, and text fields.

Create workflows to:

- Automatically set the Registration Date to the current date and time.
- Automatically set the Booking Status to Available.

Save and publish the application.

Enter sample customer and property details.

Verify that the property details are stored correctly and that workflows execute successfully.

INPUT:

The screenshot shows the Zoho Creator interface for a form titled 'property'. The form is in development mode, as indicated by the 'Development' tab in the top left. The form fields are as follows:

Field Name	Value
customer name	raghu
mobile number	+91 7688888987
Email	raghu@gmail.com
property type	buy
property category	commercial
rental agreement	no
area (sqft)	1200
place	omr
budget range	50L-1cr
property value	75,00,000
registration date	16-Jul-2026 21:25:40

OUTPUT:

The screenshot shows a Zoho Creator application interface. On the left is a dark sidebar with a 'property' menu. The main area displays a table titled 'property Report'. The table has 8 columns: 'coutomer name', 'mobile number', 'Email', 'property type', 'property category', 'rental agreement', and 'area (sqrt)'. There are 2 rows of data. The first row is for 'dhanush' with a mobile number of '+916758769876' and an email of 'dhanusg@gmail.com'. The second row is for 'Arun' with a mobile number of '+919876543210' and an email of 'arun@gmail.com'. Both properties are 'rental' and 'residential' with an area of 1200. The status 'yes' is shown for the first row and 'no' for the second. The bottom of the table indicates 'Showing 2 of 2'.

coutomer name	mobile number	Email	property type	property category	rental agreement	area (sqrt)
dhanush	+916758769876	dhanusg@gmail.com	rent	residential	yes	1200
Arun	+919876543210	arun@gmail.com	buy	residential	no	1200

DESIGN:

The screenshot shows a Zoho Creator application interface. On the left is a dark sidebar with a 'property' menu. The main area displays a form titled 'property'. The form has the following fields: 'coutomer name' (text input), 'mobile number' (text input with a country code dropdown set to '+91' and a value of '81234 56789'), 'Email' (text input), 'property type' (radio buttons for 'buy' and 'rent'), 'property category' (dropdown menu set to '-Select-'), 'rental agreement' (radio buttons for 'yes' and 'no'), 'area (sqrt)' (text input with a placeholder '#####'), 'place' (dropdown menu set to '-Select-'), 'budget range' (dropdown menu set to '-Select-'), 'property value' (text input with a placeholder '###,###,##'), and 'registration date' (text input with a placeholder 'dd-MMM-yyyy HH:mm:ss').

WORKFLOW:

RESULT:

A cloud-based Flight Reservation System was successfully developed using Zoho Creator. The application enables users to book domestic and international flights by entering travel details. The booking date and booking status are updated automatically through workflows, demonstrating the SaaS (Software as a Service) model in cloud computing.
